

## A Binomial coefficients

Gunnar is quite an old and forgetful researcher. Right now he is writing a paper on security in social networks and it actually involves some combinatorics. He wrote a program for calculating binomial coefficients to help him check some of his calculations.

A binomial coefficient is a number

$$\binom{n}{k} = \frac{n!}{k!(n-k)!},$$

where  $n$  and  $k$  are non-negative integers.

Gunnar used his program to calculate  $\binom{n}{k}$  and got a number  $m$  as a result. Unfortunately, since he is forgetful, he forgot the numbers  $n$  and  $k$  he used as input. These two numbers were a result of a long calculation and they are written on one of many papers lying on his desk. Instead of trying to search for the papers, he tried to reconstruct the numbers  $n, k$  from the output he got. Can you help him and find all possible candidates?

### Input

On the first line a positive integer: the number of test cases, at most 100. After that per test case:

- one line with an integer  $m$  ( $2 \leq m \leq 10^{15}$ ): the output of Gunnar's program.

### Output

Per test case:

- one line with an integer: the number of ways of expressing  $m$  as a binomial coefficient.
- one line with all pairs  $(n, k)$  that satisfy  $\binom{n}{k} = m$ . Order them in increasing order of  $n$  and, in case of a tie, order them in increasing order of  $k$ . Format them as in the sample output.

### Sample in- and output

Input	Output
2	1
2	(2, 1)
15	4 (6, 2) (6, 4) (15, 1) (15, 14)
